

# Hazard Assessment of Air Pollutants: The Transforming Ability of Complex Pollutant Mixtures in the Bhas 42 Cell Model

## Supplementary Data

**Tab. S1: Bhas 42 CTA protocol**

Bhas 42 CTA Protocol	OECD Bhas 42 CTA GD definition	Seeding density	Chemical Treatment	Proposed definition
Schedule 1	Initiation assay	Low (4 x 10 <sup>3</sup> cell/well)	72 h, from Day 1 to Day 4 after seeding	Acute exposure assay
Schedule 2	Promotion assay	High (14 x 10 <sup>3</sup> cells/well)	10 days, from Day 4 to Day 14 after seeding, repeated at each medium change (3 times)	Late repeated exposure assay

**Tab. S2: Complete list of PAHs and NPAHs measured in the PM extracts**

The chemicals are ordered by IARC classification.

Chemical name	CAS number	IARC classification	References	Autumn 2012		Summer 2013	
PAHs				PM <sub>1</sub> (ng/m <sup>3</sup> )	PM <sub>2.5</sub> (ng/m <sup>3</sup> )	PM <sub>1</sub> (ng/m <sup>3</sup> )	PM <sub>2.5</sub> (ng/m <sup>3</sup> )
Benzo[a]pyrene	50-32-8	1	<sup>1,2,3</sup>	0.062	0.173	0.030	0.002

\* LTC, Lowest Transforming Concentration in Bhas 42 CTA experiments. The values reported in Table S4 were extrapolated from the literature figures, however it was not always possible to extract the lowest concentration able to induce the cell transformation. In some cases a range including the lowest dose inducing Bhas 42 cell transformation was reported, in others the data was reported as "less than [conq]", because that value represented the lowest tested concentration and a NOEL (No Observed Effect Level) was not experimentally observed. Due to these uncertainties, the concentrations reported in Table S4 are more accurately described as the "lowest transforming concentration" (LTC), rather than the LOEL (Lowest Observed Effect Level).

na, not available; \*\* highly cytotoxic (<10% survival)
