

# Machine Learning Prediction of Cyanobacterial Toxin (Microcystin) Toxicodynamics in Humans

## Supplementary Data

$$Precision = \frac{\# TP}{\# TP + \# FP} \quad (1) \quad \begin{aligned} \# TP &= \text{Number of True Positive} \\ \# FP &= \text{Number of False Positive} \\ \# FN &= \text{Number of False Negative} \end{aligned}$$
$$Recall = \frac{\# TP}{\# TP + \# FN} \quad (2)$$
$$F - Score = 2 * \frac{Precision * Recall}{Precision + Recall} \quad (3)$$

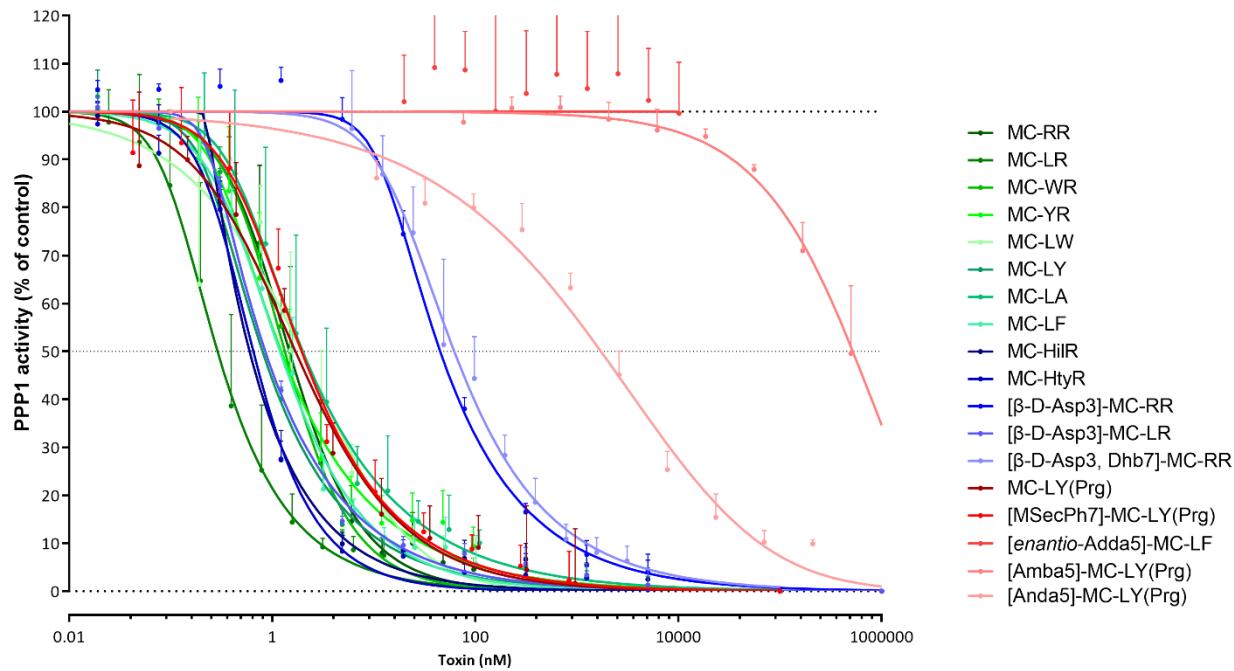

**Fig. S1: Calculation of prediction measurements**

Precision is defined as the ability of a model to retrieve relevant results, recall as the ability of a model to retrieve relevant results and the F-Score as harmonic mean of precision and recall.

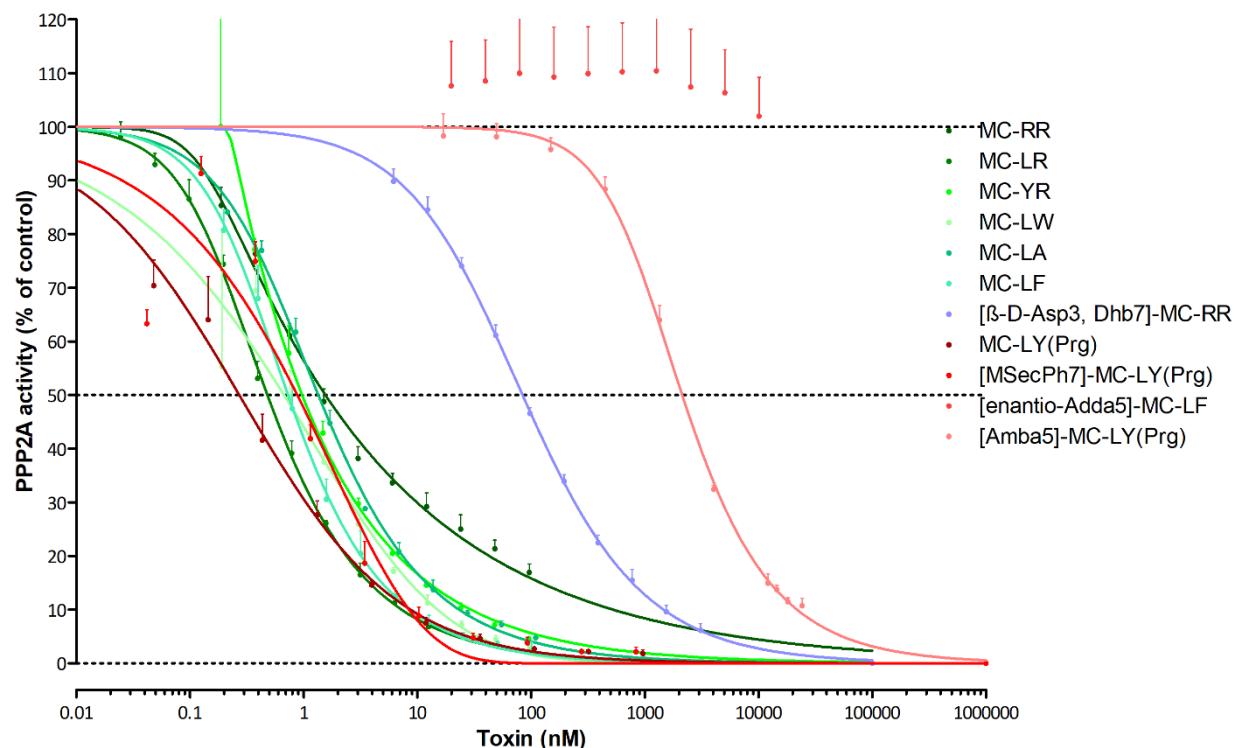

**Fig. S2: Comparison of the hPPP5 expression with the empty expression**

Different dilutions of the two respective fractions were analyzed with regard to their activity to dephosphorylate pNPP.

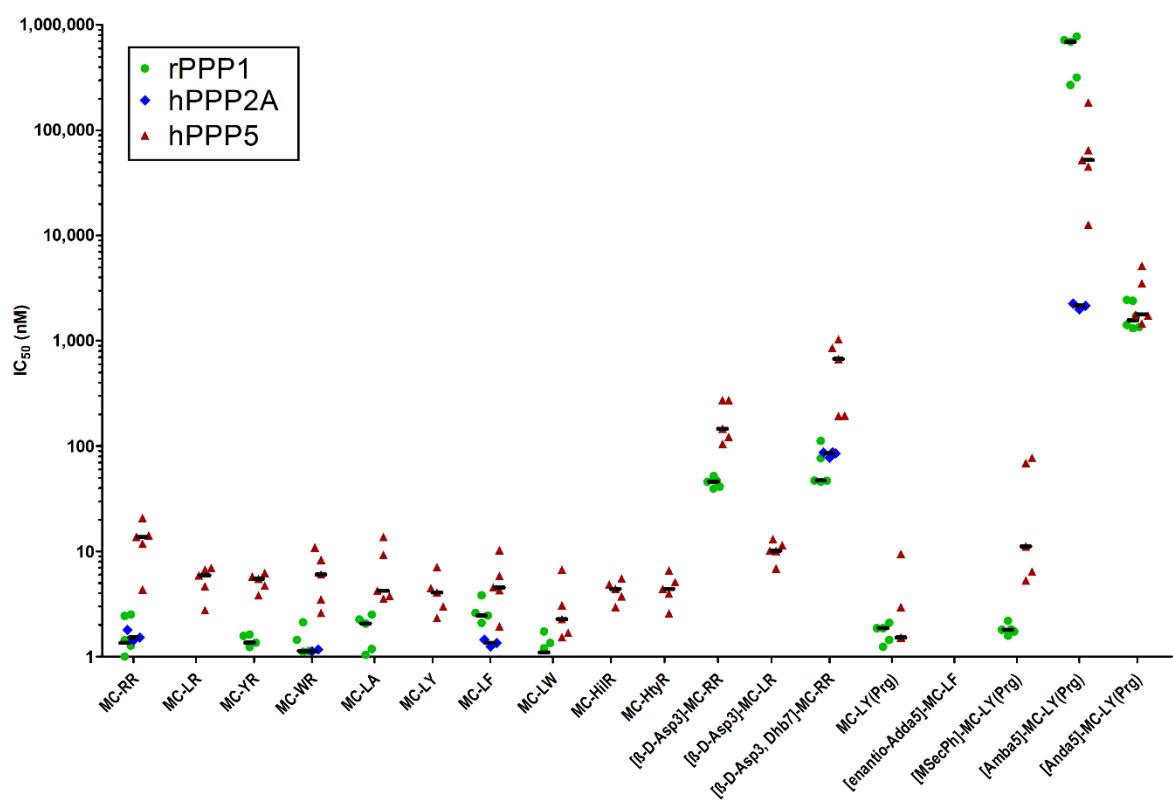

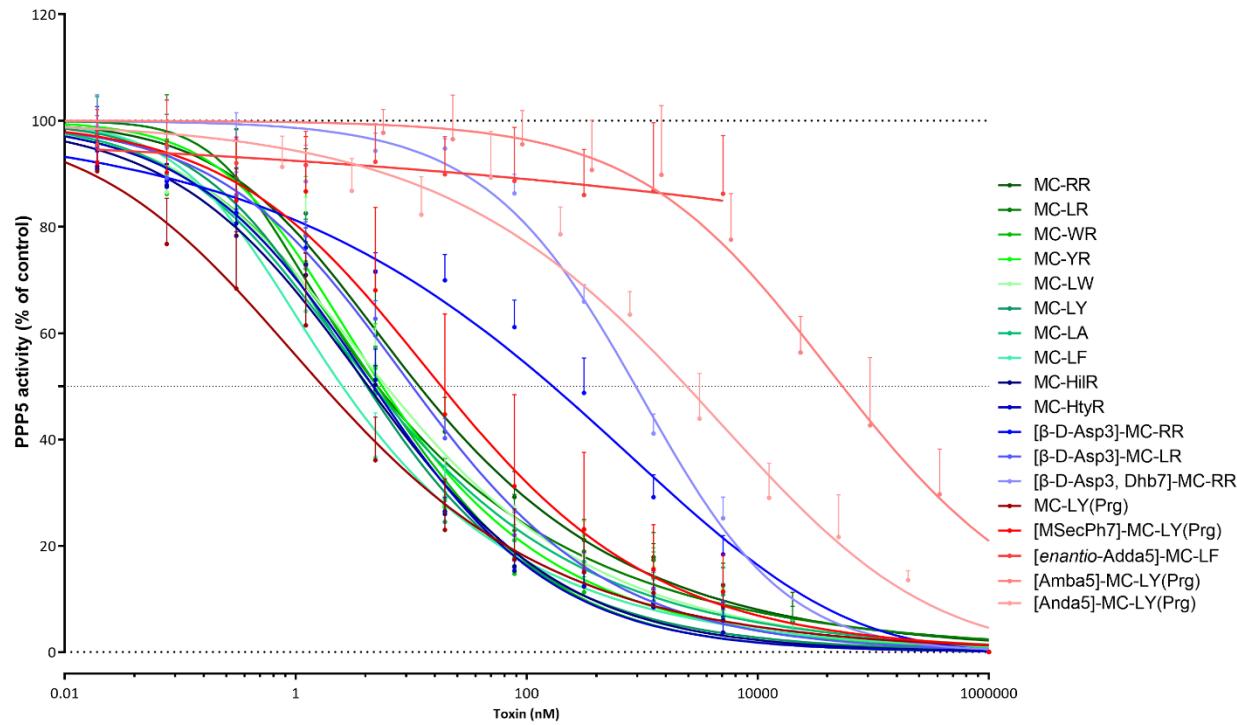

**Fig. S3: Inhibition curves for PPP1**

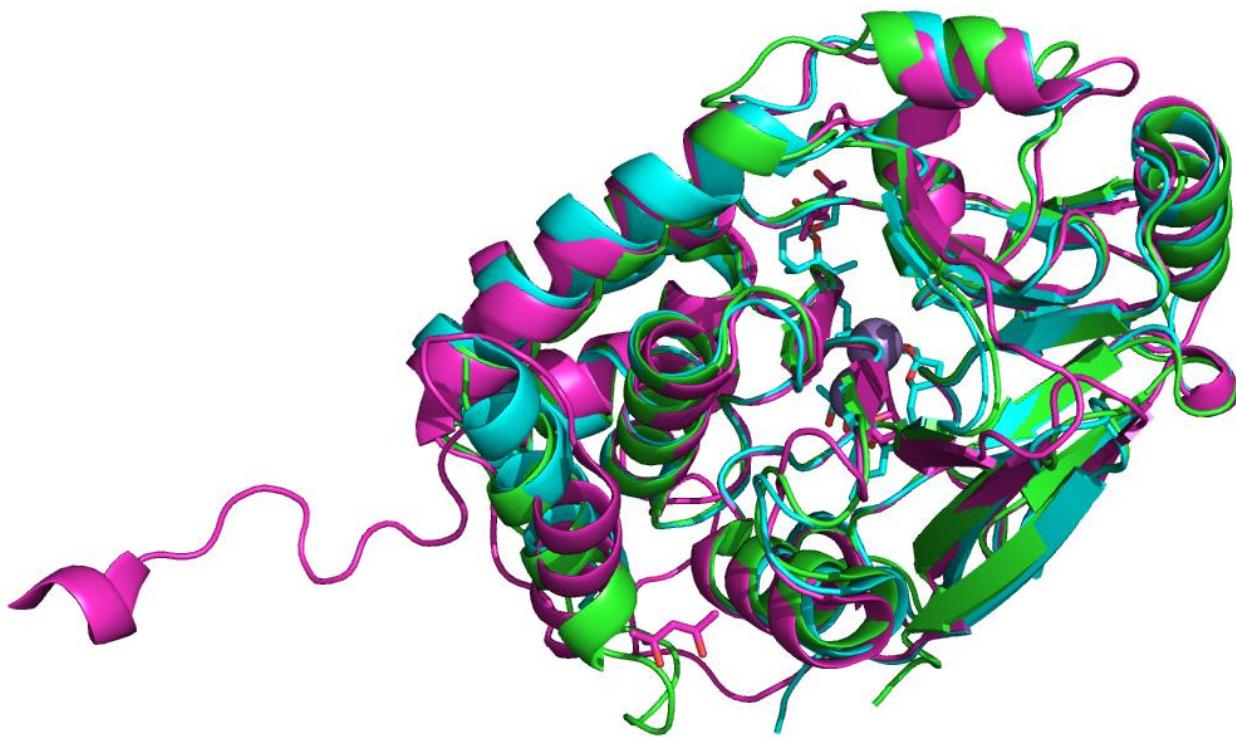

Only upper error bars (SD) are shown for reasons of clarity.

**Fig. S4: Inhibition curves for PPP2A**

Only upper error bars (SD) are shown for reasons of clarity.

**Fig. S7: Overlay of the structures of the three PPP used in the study**

PyMOL was used using the PDB entries for PPP1 (4MOV, green), PPP2A (2IE4, teal) and PPP5 (4ZX2, magenta).

**Tab. S1: Congener-dependent modifications**

Hil (homoisoleucine) and Hty (homotyrosine) are variants of isoleucine and tyrosine respectively, which have an additional CH<sub>2</sub> compared to the parent amino acids. For structures of amino acids see Figure 1.

**Tab. S2: Results of the mass spectrometric analysis**

First two hits were hPPP5 and thioredoxin, which are both part of the expressed fusion protein. Other proteins were found in lower quantity.

**Tab. S3: Summary of settings of different machine learning models trained**

The following abbreviations were used: ML, Machine Learning; RF, Random Forests; GBM, Gradient Boosting Machines

Feature	ML algorithm	Tuned hyper-parameters	
		Number of estimators	Maximum tree depth
Mol2vec + ProtVec	RF	50	5
Mol2vec	RF	50	5
Mol2vec	GBM	100	3
